2_2 Limitations

The Driver is intended to be used for Ingenico Telium device only and is compatible with other Ingenico applications such as LLT.

The Force COM feature provided by the Telium USB Jungo driver makes the “TeliumUsbPortUpdater” obsolete. This software must not be used when the Jungo driver is installed.

The Driver Installer automatically uninstalls the old Windows driver and the “TeliumUsbPortUpdater” tool.

The user must have administrator level access in order to install or uninstall the driver correctly.

The installation process must be executed when no TELIUM terminal is currently connected to the PC.

The installer will uninstall all previous versions of the drivers and the TeliumUSBPortUpdater service. This operation may take some time to complete.

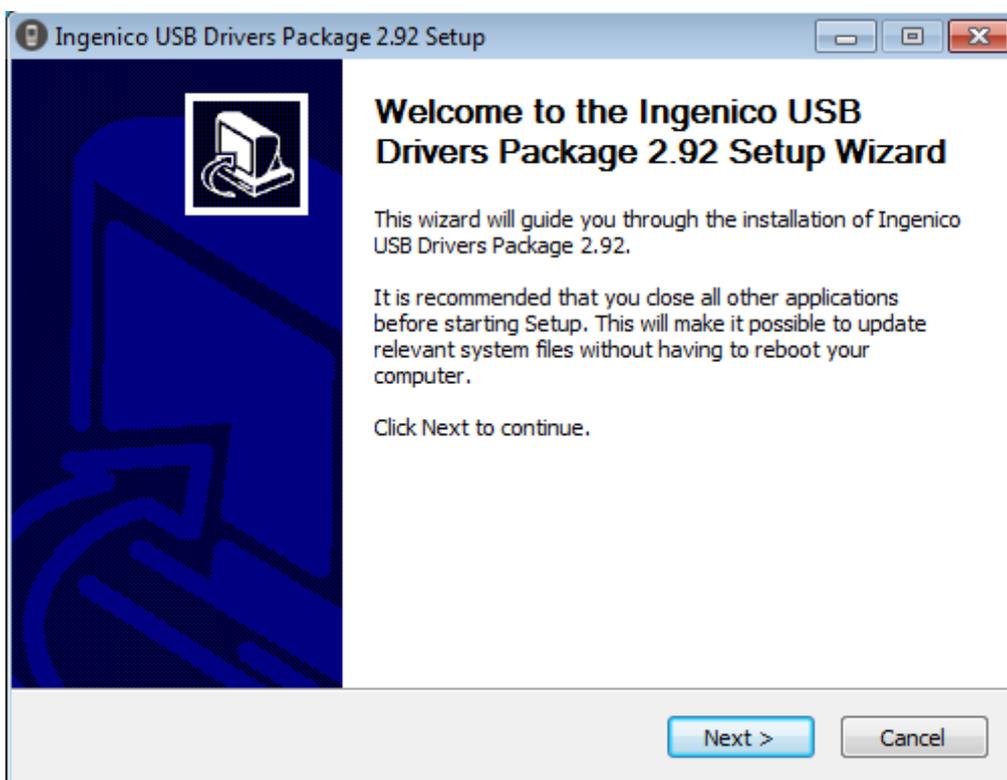

3 Installation Process

To start the installation process, run the “IngenicoUSBDrivers_XX.YY_setup” executable file.

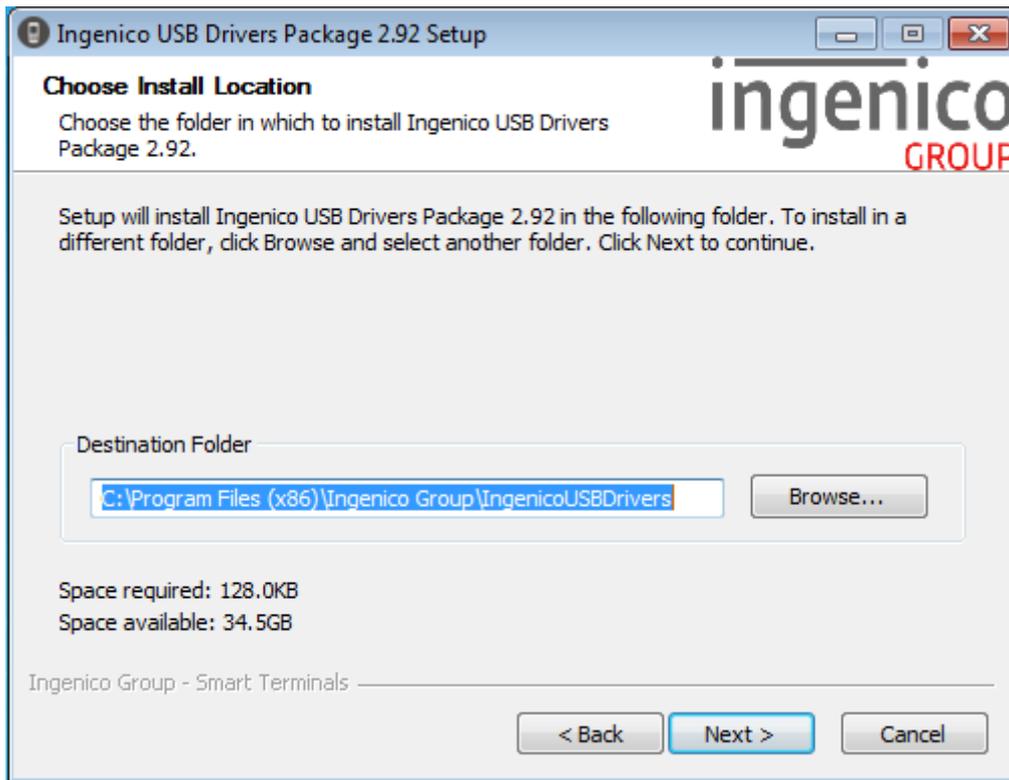

Please note that XX.YY is the version number of the installation package and not the version number of the Driver itself.

3_1 USB Driver Installation Wizard

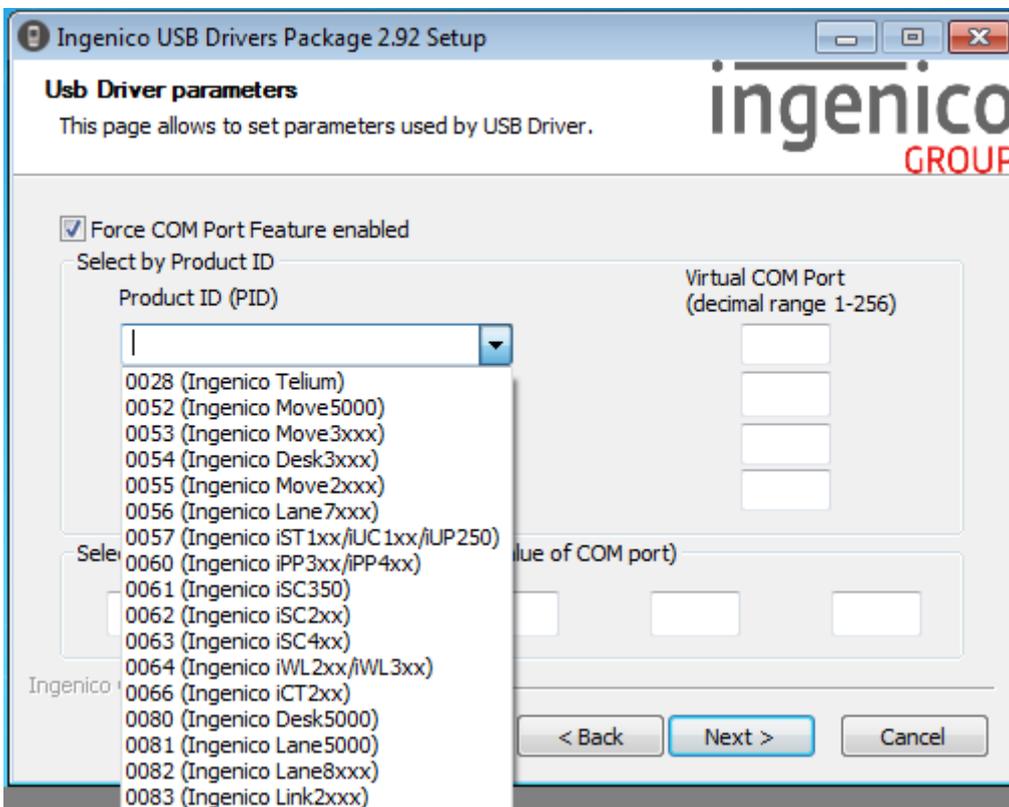

This installer can be launched with the graphical interface by double-clicking on the executable file. The initial screen will confirm which version of the driver will be installed.

Click **Next >** to start the installation process.

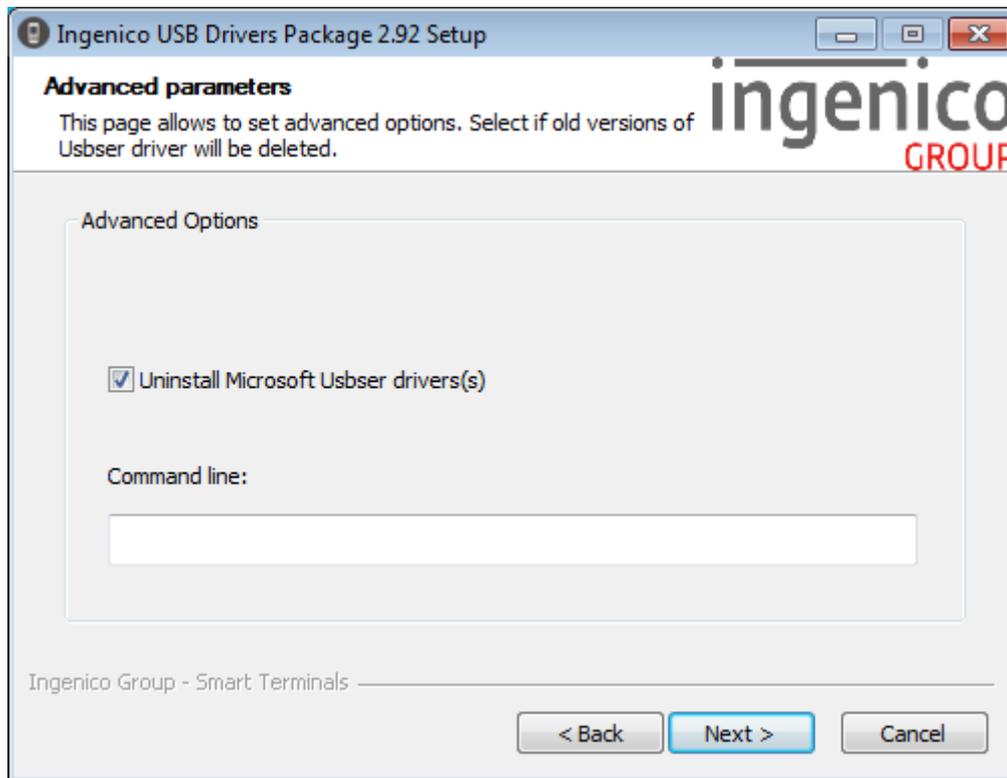

To install the driver to a specific location click **Browse** to search for the desired location, otherwise just click **Next >** to accept the default location specified.

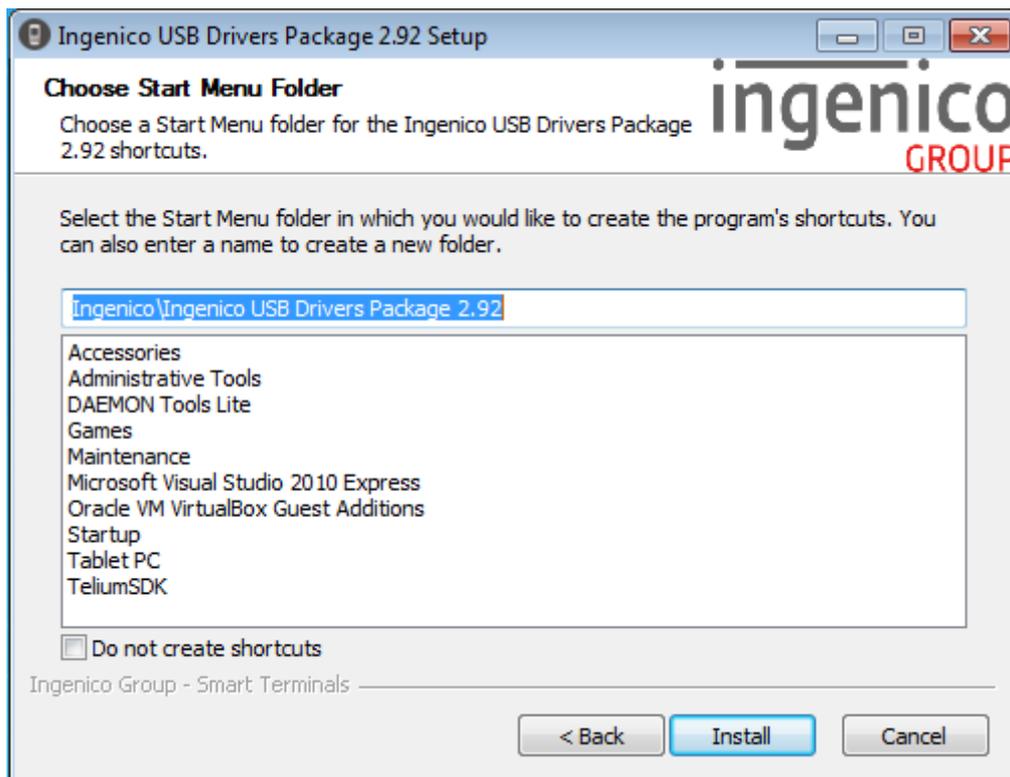

To enable the Force COM Port feature check the **Force COM Port Feature enabled** option and complete the configuration as per your requirements. Once completed click **Next >**

For more information on the Force COM Port feature, or how to disable/enable it manually, please refer to section 5_4 *How to manually enable the force COM feature*

If you wish to uninstall the Microsoft USB driver (usbser) then check the option. Otherwise, if you wish to retain this, uncheck the **Uninstall Microsoft Usbser driver(s)** option before clicking **Next >**

You can also add options for the installation process via the command line input. Please refer to section 3_2 *USB Driver Installation Command Line*.

Choose the start menu folder into which shortcuts will be placed or check the **Do not create shortcuts** option before clicking **Install** to start the installation.

Once the installation is complete the install wizard will advise that the install is now complete; click **Finish**

3_2 USB Driver Installation Command Line

It can also be called via the command line with the following parameters which are case sensitive:

```
IngenicoUSBDrivers_XX.YY_setup.exe [/S] [/? --help] [[/PORT=NNN]
[/PID=XXXX:YYY]] [/U --uninstall]
[/partial_cleanup] [/INST_PATH path]
```

/? or --help	Display this message.
/S	Launch installation in silent mode.
/PORT=port	Enable Force COM Port where "port" is the port number in numeric (eg. 1-256). If "port" is specified then the installation is completed with the specified port number. If the "port" is not specified then the installation will attempt to complete using the port number found in the previous installation - if this is not found then an error is returned.
/PID=pid:port	Enable Force COM Port by PID where "pid" is the USB PID of the terminal type in hex (eg. 0028) and the "port" is the port number in numeric (eg. 1-256).
/U or /uninstall	Uninstall older versions of the Jungo USB drivers only and exit the program.
/partial_cleanup	Uninstall current version of the Jungo USB Driver only.
/leave_usbser	Do not uninstall the Windows USB Driver(s) (usbser).
/INST_PATH path	Specify the installation path.

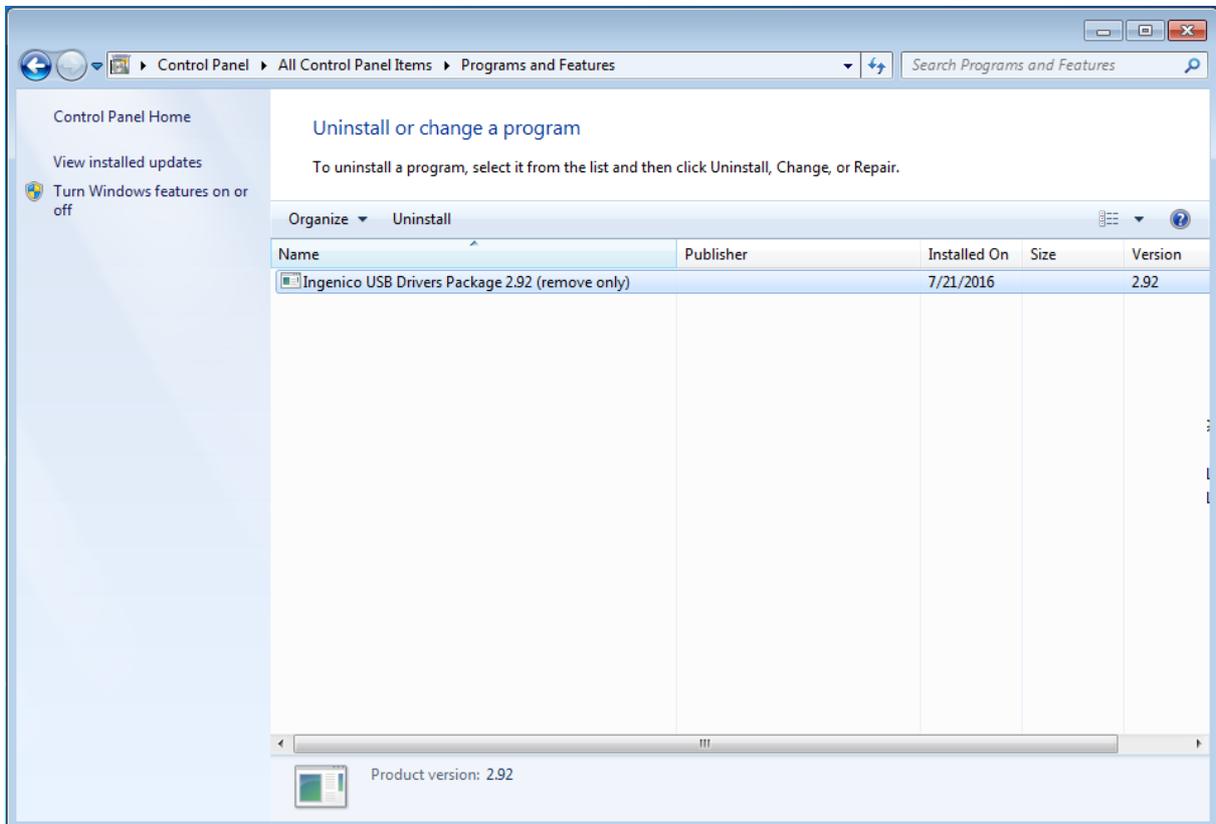

The installation will return one of the following codes:

- 0 The installation completed successfully
- 1 The installation requires the operating system to be restarted in order to complete
- 2 The installation has failed or has been interrupted

However if the executable is run without any parameters, the force COM feature can be manually enabled (cf 5_4 *How to manually enable the force COM feature*).

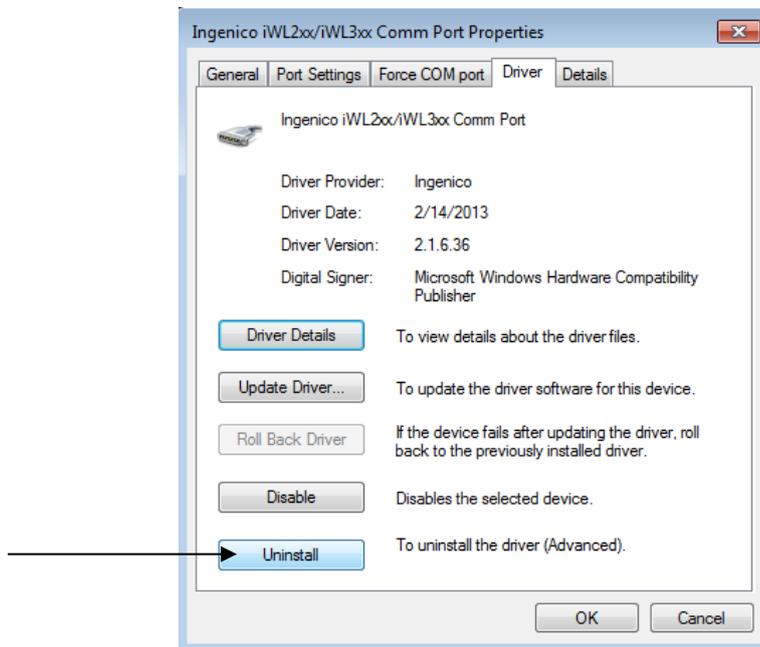

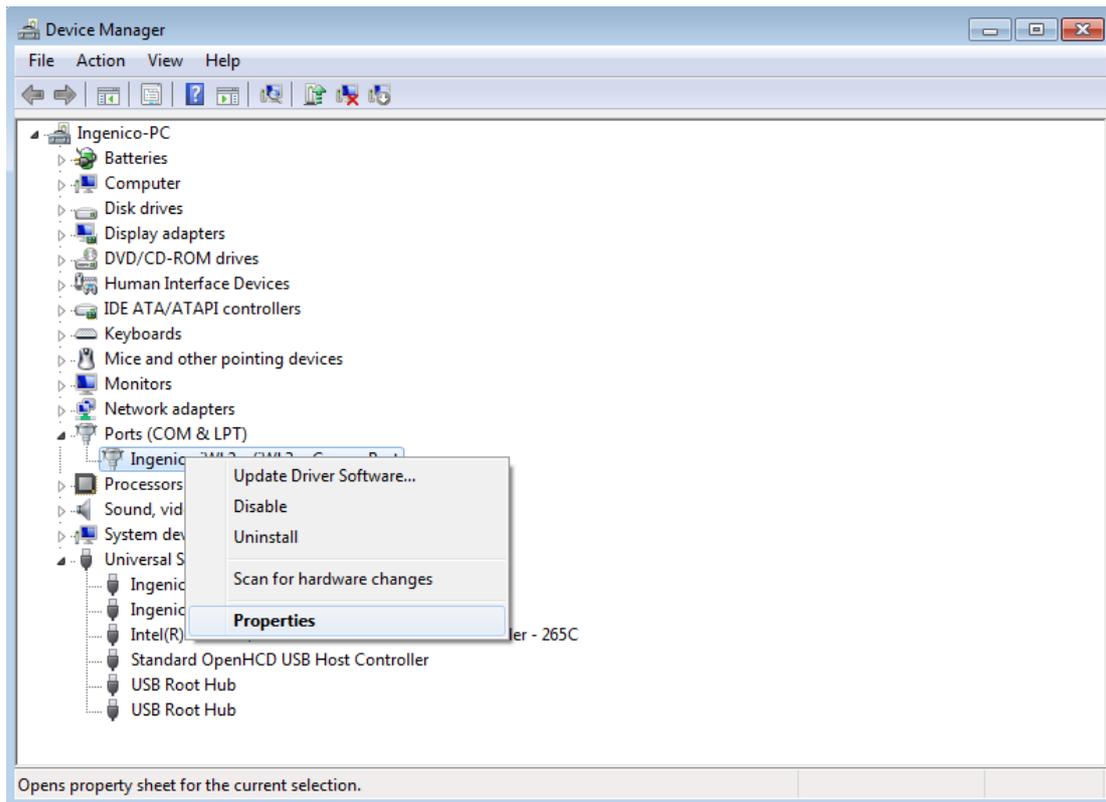

4 Uninstall process

To uninstall the Driver go to the add/remove programs in the control panel and remove the Ingenico USB Drivers Package xx.yy (remove only) item:

One must not try to uninstall through the device manager since it is either ineffective or incomplete. On Windows XP it has no effect and on Windows Vista and Windows 7 it doesn't uninstall the driver completely.

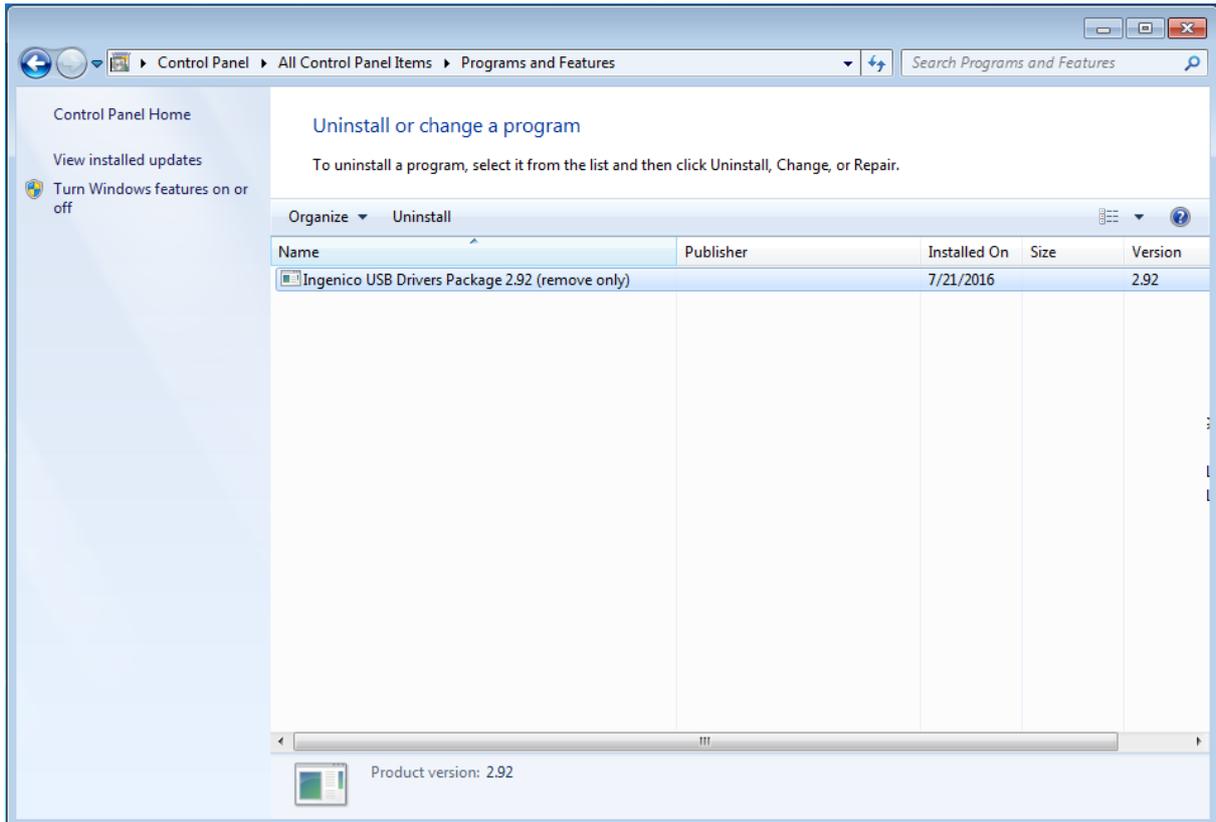

Important note: Do not try to uninstall drivers through the following menus of the Device Manager window.

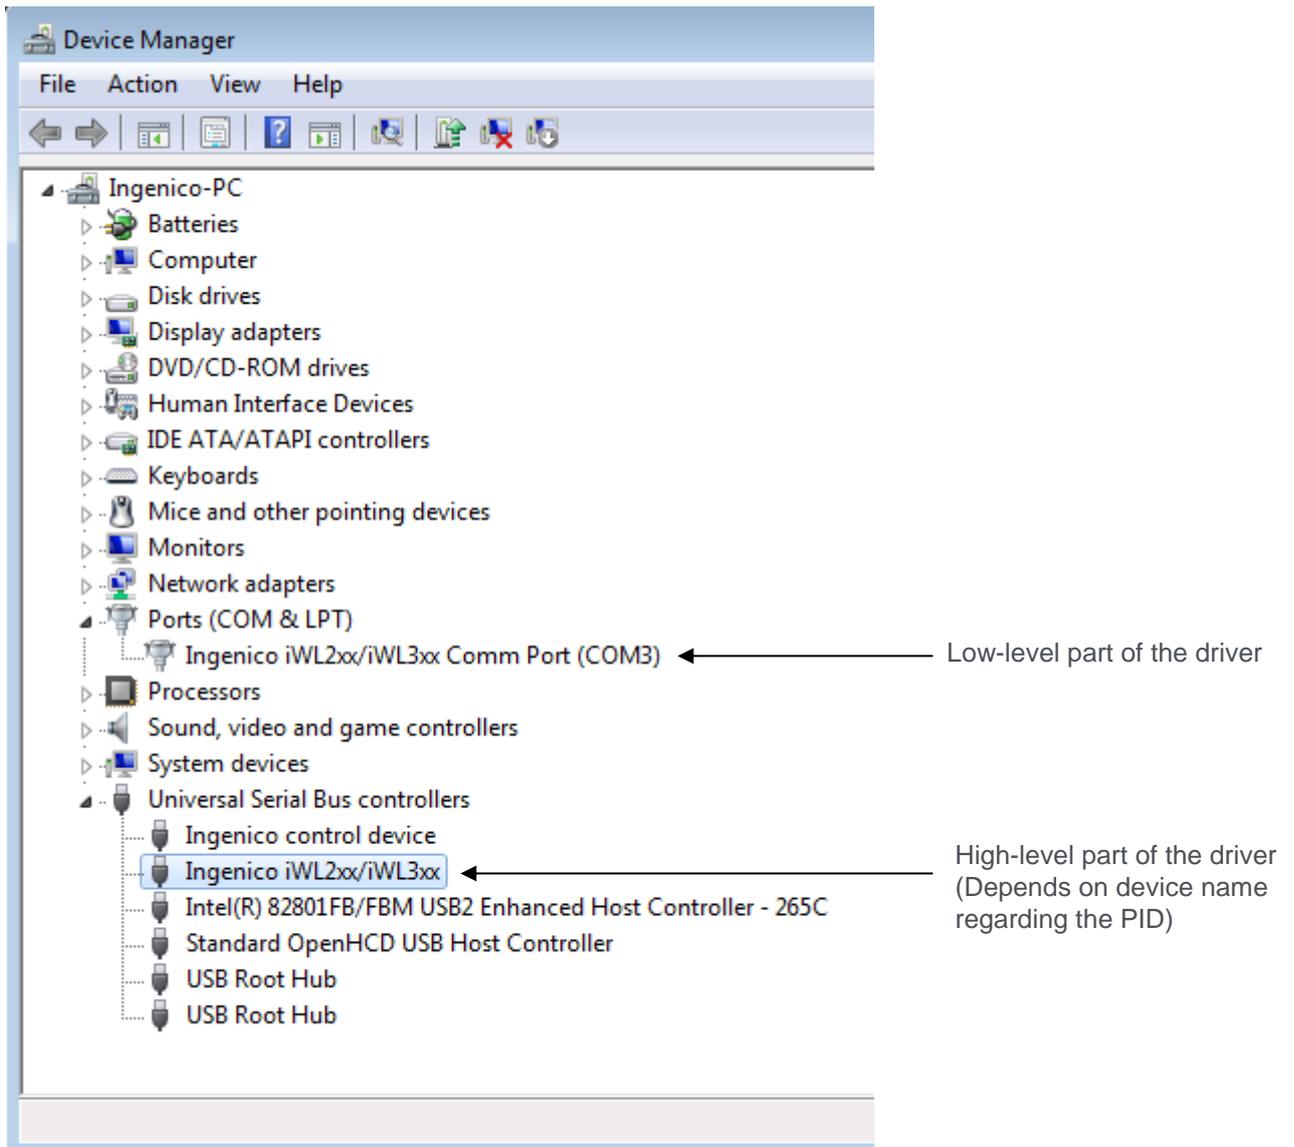

5 Frequently asked questions

5_1 How do I know that the driver is installed?

The easiest way of knowing whether the driver is installed is to check the “add/remove programs” window under the control panel. If the driver was installed with the installer there is the item “Ingenico USB Drivers Package xx.yy (remove only).”

If the driver was not installed with the installer, one must find in the Device Manager the following new hardware.

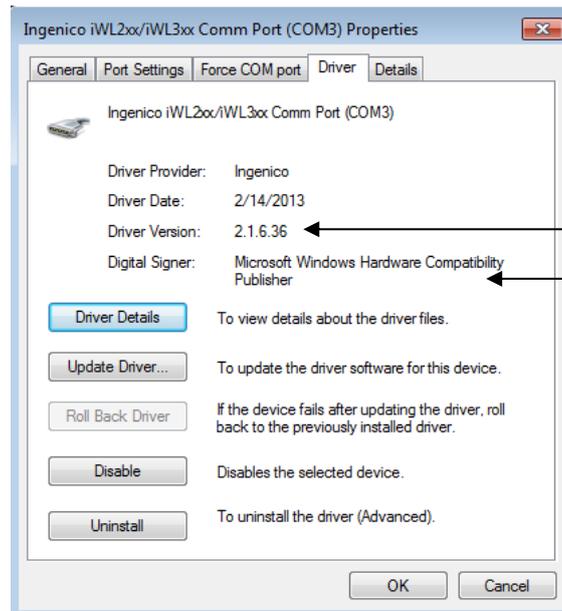

5_2 How can I know the version of the driver I use?

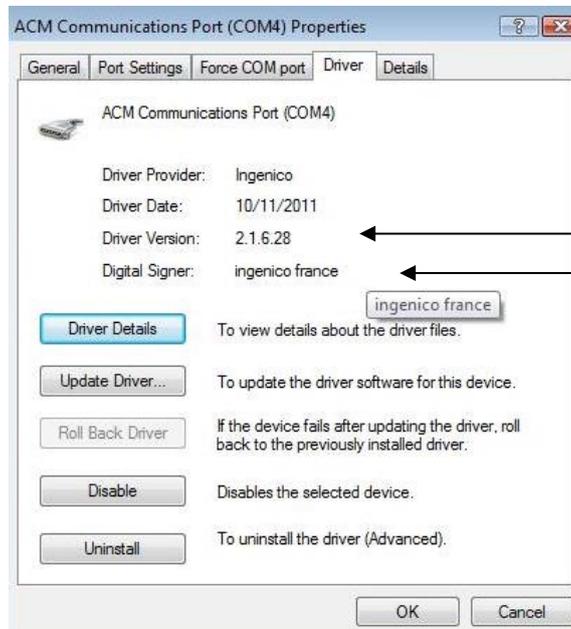

In order to check the current driver version, a Telium device must be connected. Right-click **My Computer**, choose **Manage** and select **Device Manager** in the left-hand pane.

Note: If there is no “Force COM port” tab, it means that is not the Driver but the old Windows driver.

5_3 How can I use my previous driver again?

If there is a requirement to roll back to the previous driver, for example if you were using LLT and you just installed the new Driver or if you have another driver (not distributed by Ingenico) which has been overwritten by this new driver, it's possible to recover the previous state without uninstalling the driver.

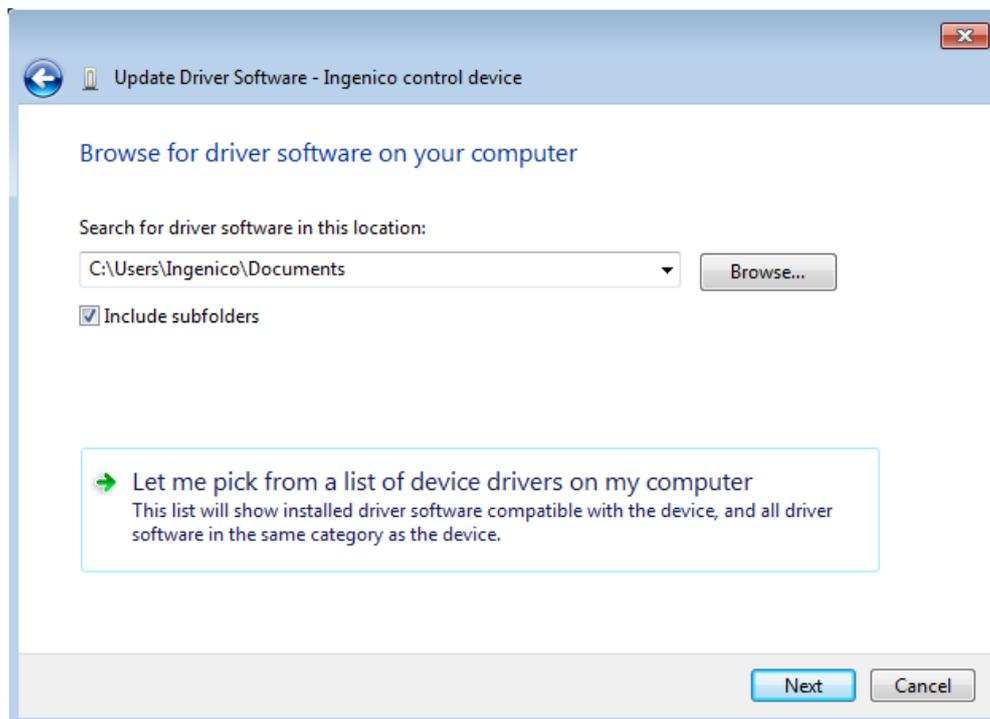

In order to roll back the driver a Telium device must be connected. Right-click **My Computer**, choose **Manage** and select **Device Manager** in the left-hand pane

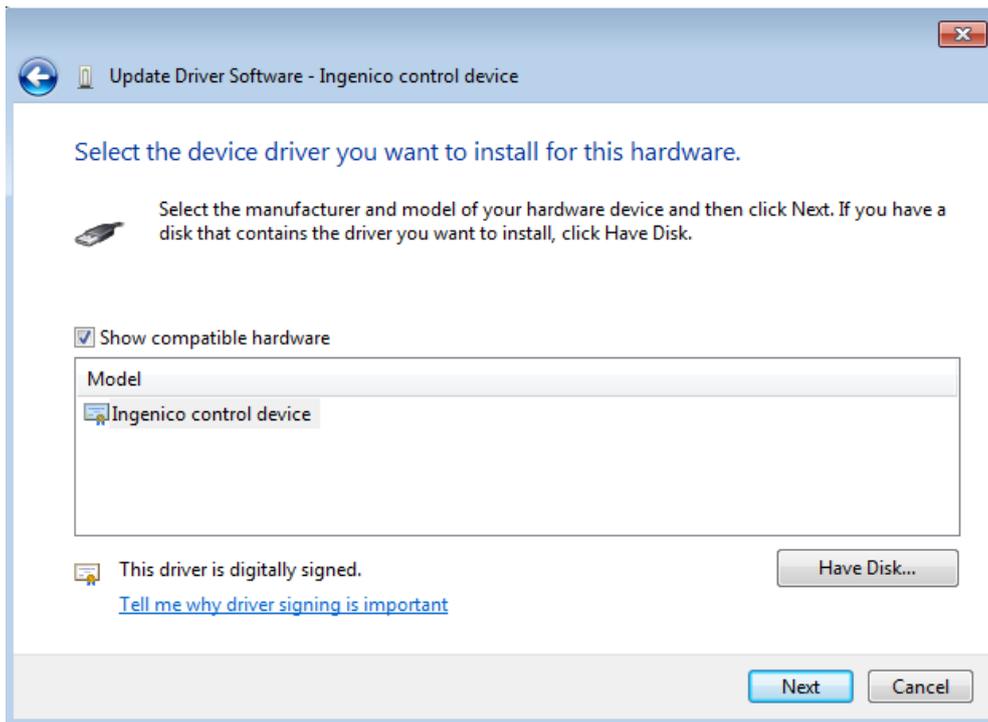

In the properties of the high-level part of the driver (the one under Universal Serial Bus controllers in the Device Manager), right-click on the USB ID Name (eg. Ingenico iWL2xx/iWL3xx - see 2_1_2 *Terminals*) and choose **Update Driver** and follow the instructions.

Choose **Browse my computer for driver software** and click **Next >**

Choose **Let me pick from a list of device drivers on my computer** and click **Next >**

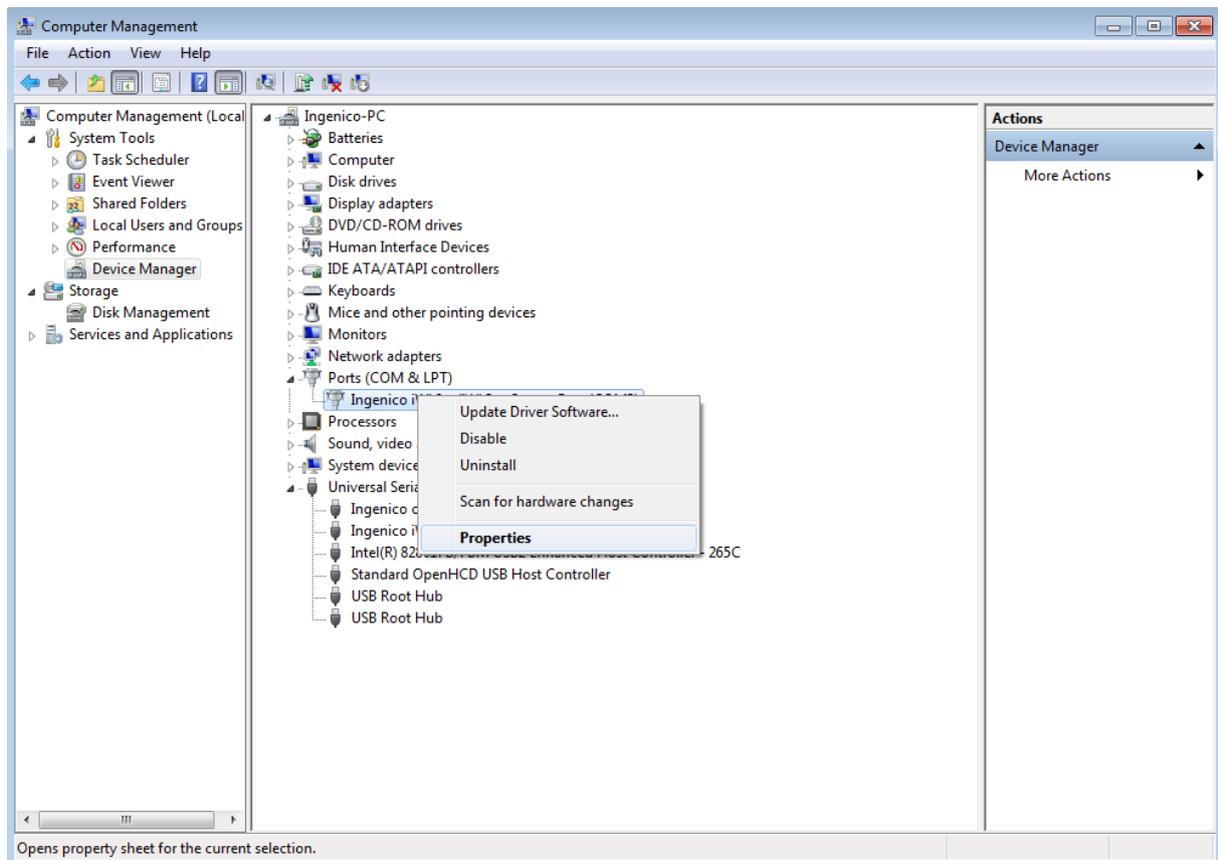

Choose the driver from the list as appropriate and click **Next >**
After the driver update has completed click **Finish**.

5_4 How to manually enable the force COM feature

The Driver allows for you to force the virtual COM port of the USB device so that it does not change even if connected to different USB sockets. This feature can be configured to:

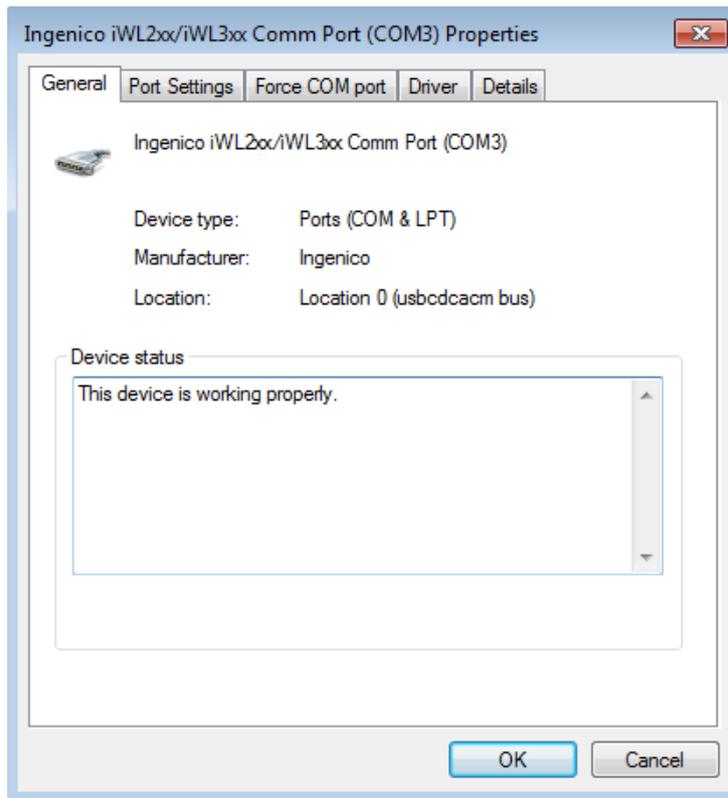

- Specify the COM Port based on the type of terminal (USB VID/PID - see section 2_1_2 *Terminals*); or
- Specify the COM Port order for unspecified types of terminal; or
- A combination of both.

To enable or disable the Force COM feature, a Telium device must be connected. Right-click **My Computer**, choose **Manage** and select **Device Manager** in the left-hand pane and right click on **Ingenico xxxxxx Comm Port** then **Properties**.

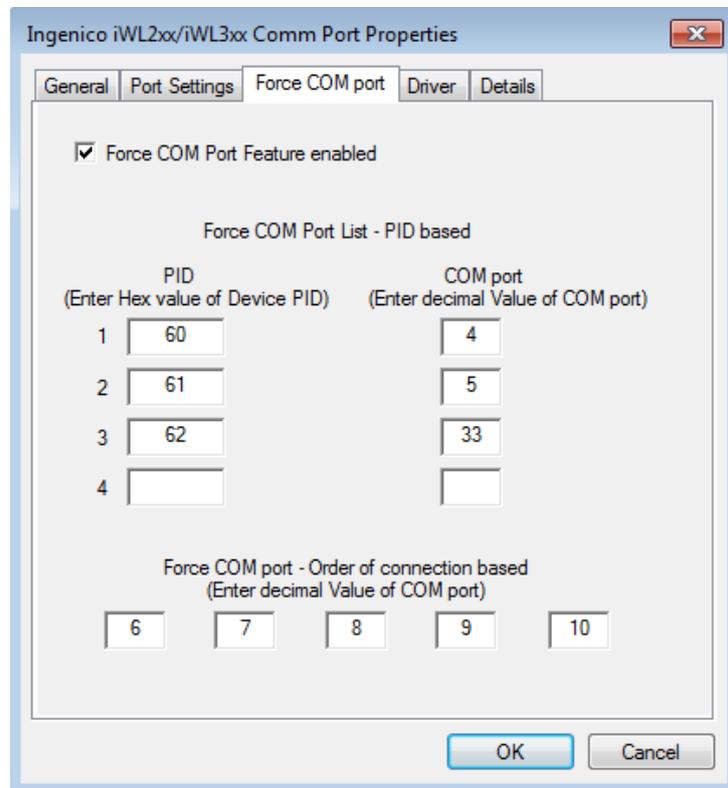

In the right-hand pane you will see two devices:

- Ports (COM & LPT) section
- The low-level driver will be named "Ingenico xxxxxx Comm Port (COMn)" or "Sagem Telium Comm Port (COMn)", where "COMn" refers to the port currently assigned. It contains all the configuration options.
- Universal Serial Bus controllers section
- The high-level driver will be named as per the USB ID Name (see section 2_1_2 *Terminals*) and will vary depending on the terminal.

Then select the **Force COM port** tab to display the Force COM port features;

To enable or disable the Force COM Port feature check or uncheck the **Force COM Port Feature enabled** option respectively.

In the example shown above the option is enabled.

The Force COM Port feature has a number of settings to force the COM port. Depending on the exact requirements the level to which the different options are set will vary.

In the above example the following rules are defined:

- If an Ingenico iPP3xx/iPP4xx terminal is connected (PID 0x0060) then the COM Port selected will be COM4;
- If an Ingenico iSC350 terminal is connected (PID 0x0061) then the COM Port selected will be COM5;
- If an Ingenico iSC2xx terminal is connected (PID 0x0062) then the COM Port selected will be COM33;
- If any other terminal is connected (any PID other than the three specified) then the COM Port selected will be COM6 (or in this example it could fall back to COM7-10 in that order if those ports are in use etc...).

The same port number may be used for more than one option for example, and there is no requirement to complete all the fields. However, it is recommended that you add at least PID 0x0028, together with at least one port for unspecified PIDs.

Incorrect configuration of the Force COM Port feature can cause the Windows “System Settings Change” (ie. restart required) dialog box to appear when a terminal is attached and a COM Port cannot be allocated.

See section *2_1_2 Terminals* for a complete list of PID and USB ID Names supported by the current version of the driver.

5_5 Why the window “System Settings Change” is displayed?

The “System Setting Change” window - requesting to restart the computer - is displayed when the PID of the terminal currently connected to the PC is not listed in the parameters of the **Force COM port** feature when enabled.

To remove this window, the PID of the terminal must be specified from the configuration panel of **Force COM port** feature or a default COM port must be set.
